PURPLESEC CYBER RISK MANAGEMENT PLATFORM

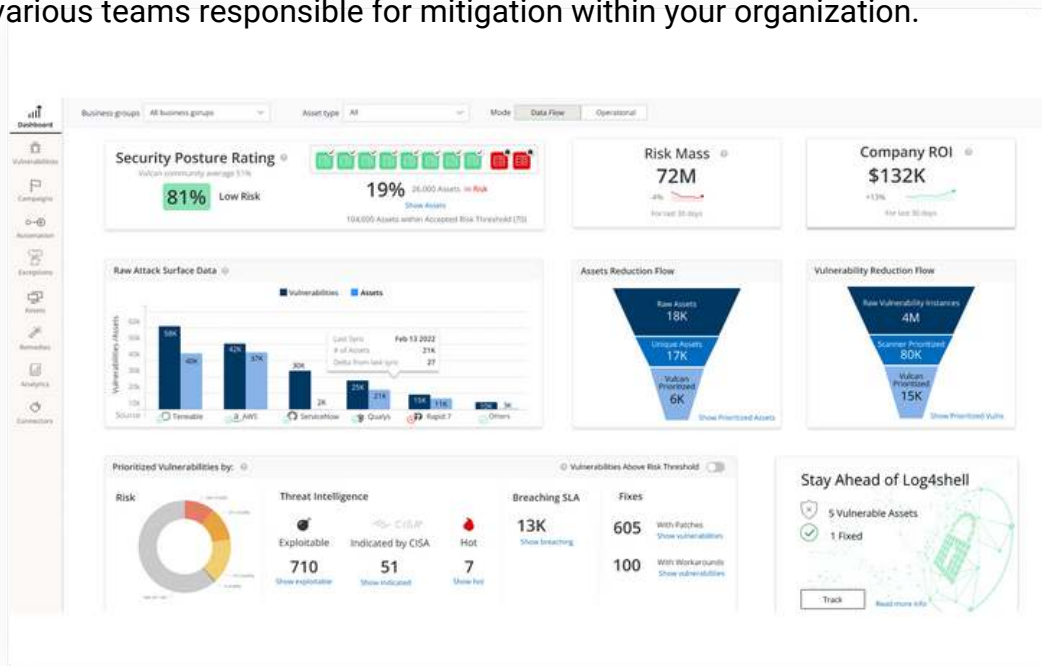

The Challenges Of Managing Today's Risk

As IT environments become more complex and the attack surface expands the potential for risk grows. Organizations at all sizes struggle to prioritize and mitigate vulnerabilities at scale across highly distributed architectures. And entire vulnerability and risk management programs are now responsible for everything from hybrid and multi-cloud environments to...

...container images and code repositories, and as well as traditional storage and network infrastructure. Effective mitigation processes now need to span diverse teams (security operations, DevOps, application development, etc.), each with its own business mandates, unique processes, and preferred operating technologies.

PurpleSec's Cyber Risk Management Platform

PurpleSec gives you the tools to effectively manage the vulnerability and risk lifecycle for all your cyber assets, including application, cloud, and infrastructure. It integrates with the tools you already have and delivers a single platform to analyze and prioritize all your vulnerability and risk data and efficiently orchestrate remediation. The platform also allows you to automate communication and collaboration between the various teams responsible for mitigation within your organization.

With PurpleSec You Can:

Orchestrate and accelerate risk mitigation with automated playbooks

Manage the cyber risk lifecycle for application, cloud and infrastructure in one place

Intelligently analyze and prioritize vulnerabilities based on your organization's risk

Facilitate communication and collaboration between all departments

Get expert remediation insight for all CVEs with fixes and workarounds

Access deep analytics based on your organizational processes and requirements

Understand risk management activities with customizable dashboards and reports

PurpleSec Delivers:

Improved cyber risk awareness: Centralize, analyze, and correlate vulnerability and risk data from dozens of sources for deeper visibility and understanding of actual risk that is relevant to them and how it might impact them.

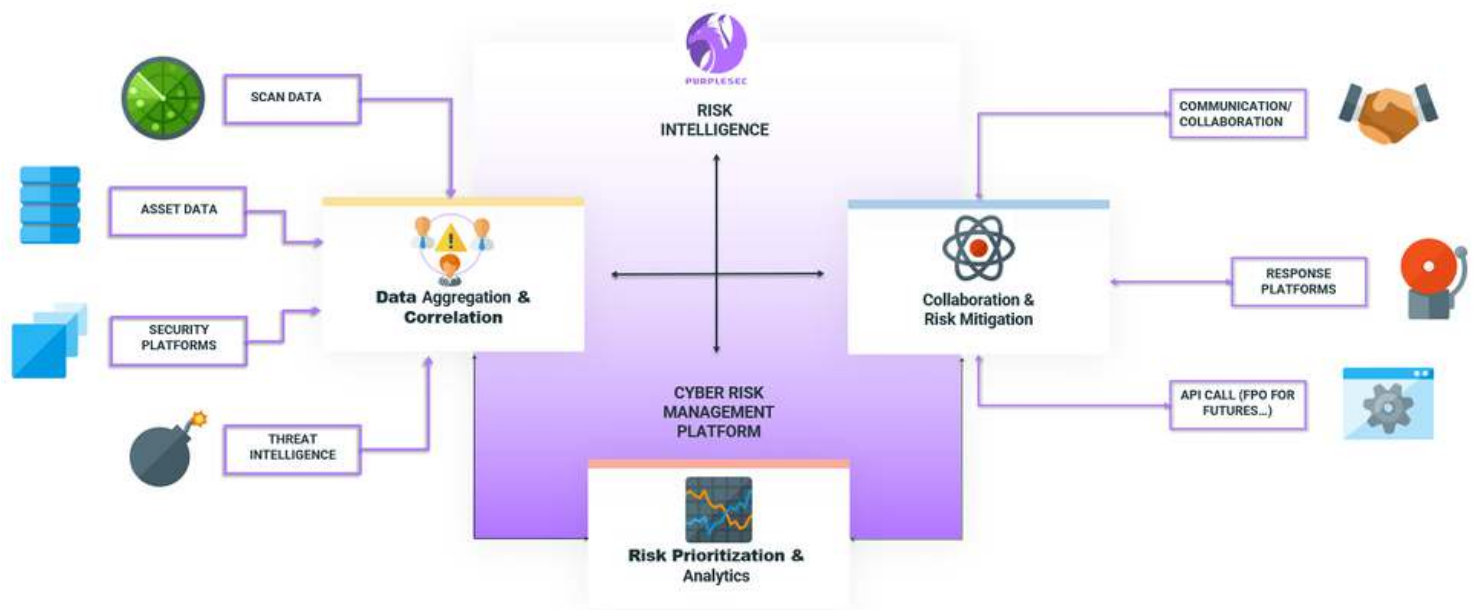

Automated vulnerability and risk prioritization: Automatically and intelligently prioritize which vulnerabilities each individual organization should address first to minimize risk and strengthen their security posture.

Rapid vulnerability and risk mitigation: Automatically deliver the right fix or workaround solution with expert-defined context to fit any vulnerability for rapid remediation, with optional fully automated deployment.

Better collaboration between departments: Automatically communicate vulnerability and risk data and associated fix details to the right department for resolution in the way that they prefer, and track what is done when.

Comprehensive tracking and reporting: Gather deep analytics for compliance, internal auditing, board reporting, and resource planning for extensive understanding of how your vulnerability and risk management efforts are working

How PurpleSec Works

AGGREGATION AND CORRELATION OF ALL DATA

PurpleSec integrates with any vulnerability and risk detection solution, covering servers, workstations, containers, cloud workloads, code, applications, and more. It consolidates risk analysis across infrastructure, code, applications, and cloud assets, delivering full risk visibility across every potential attack surface.

CUSTOMIZABLE RISK ANALYTICS AND REPORTING

PurpleSec delivers extensive analytics and lets you create custom reports to serve different audiences and purposes, such as executive-level dashboards to track KPIs or detailed views into critical vulnerabilities and high priority tasks.

CONTEXT-AWARE VULNERABILITY PRIORITIZATION

PurpleSec analyzes relevant data from a wide range of sources, including organizational context specific to each enterprise, and delivers expert vulnerability assessment intelligence to deliver more information and better prioritization so that you understand the actual risks to your environment and how they might impact your organization.

EXPERT-DEFINED REMEDIATION INTELLIGENCE

PurpleSec automatically enriches vulnerability and risk data using our own machine learning and expert-driven engine to deliver proprietary **threat intelligence*** (exploits, running campaigns, threats, and usage in the world) as well as **Remediation Intelligence** (recommended patches, workarounds, configuration changes and mitigations).

COMMUNICATION AND COLLABORATION WITH ALL DEPARTMENTS

PurpleSec enables Security, IT, DevOps, and Application Development teams to manage risk together in the most effective way for their operating requirements, using their preferred toolsets. It is tightly integrated with ITSM, application development, DevOps, and deployment tools, as well as communication and collaboration platforms to orchestrate remediation processes more effectively.

AUTOMATED MITIGATION PLAYBOOKS

PurpleSec has an intuitive playbook builder for automating previously manual cyber risk lifecycle management and vulnerability remediation activities and tasks, reducing operating overhead and accelerating mean-time-resolution (MTTR).
