Know What AI You Run
And What To Fix First

The AI Risk Assessment scores every AI system in the business, sanctioned or not, in four weeks. Leadership leaves knowing where the risk sits, who owns each fix and what comes next.

WHAT TO EXPECT

Built And Bought AI, One Register
Enterprise assistants, AI inside SaaS tools, model APIs and your own agents are scored together.

No Install, No Standing Access
Discovery runs on exports and interviews. SSO logs, browser telemetry and expense reports show where AI is in use.

Builds On SOC 2 And ISO 27001
Those audits skip AI-specific risk. The assessment sits on top and maps back to their controls.

Mapped To The Frameworks You Answer To
NIST AI RMF, ISO/IEC 42001, OWASP LLM Top 10, and the EU AI Act where it applies.

Questions Leadership Can Answer By Week Four

- **Inventory**
  Which AI tools does the business run, and who owns each one?
- **Exposure**
  Which risks need a decision now, and which can wait?
- **Vendors**
  Which outside AI vendors touch sensitive data?
- **Priorities**
  What gets fixed in 30, 60 and 90 days, and by whom?
